

Pacific Aeromodels (Green Models) 1/4 scale DeHavilland Tiger Moth

<http://www.rcgroups.com/forums/showthread.php?t=535079&highlight=sr+eindecker>

78" span

Extensively modified ARF.

Features satin re-finished wings, custom graphics, full Proctor flying wire and

control wire package, custom cockpit detail, Aces of Iron pilot, custom hand made fully functional scale landing gear with Robart struts.

Flys for 20+ minutes on a charge. Beautiful scale aerobatics, vertical power if needed. This beauty will cruise along at a walking pace, but has the power to go straight up like a rocket when you need it

Countless hours and dollars spent modifying this ARF to get it to this point.

Flies like a dream, inverted, knife edge, BIG loops, GIANT hammerhead stalls....

Looks amazing. Has won trophies in both static and flying competitions.

Big Himax outrunner, very reliable. Pretty much ready to fly. \$975, spare unbuilt/unmodified ARF also available.

Also have many smaller planes, built and unbuilt. Multiplex FunJet brushless, GWS A4 brushless, Cermark Freedom 3D brushless, Multiplex Kranich 2.85 meter powered sailplane ARF, Robbe ASW 17 4 meter sailplane, and lots more.

I would make someone a great package deal if they took it all!
