I'm glad to hear you like it so far, Jim. We tried real hard to make it simple to use.

If you start in System mode (holding roller at power-up) then the menu options are laid out in pretty much the order you should use them. If you don't know what something is, you can skip it.

The same thing for the Function list (boot normally). Click the roller and then things are arranged in pretty much the same order. There is one exception to that rule, and for good reason.

On the Servo menu, the Reverse option is typically what you're going to want to do first. We put it as the 3rd option on the list because:

- a) you only use it once per model, generally, and
- b) you definitely DON'T want to accidentally activate it.
