Sequencer Links by czorzella & TM1

The Sequencer is a great feature that can be used in multiple ways. If this is going to be your first contact with Spektrum sequencer programming, then I suggest that you take a look at information posted at

https://sites.google.com/site/spektr...trum-sequencer

and

Reply by TM1:

Someone should have said: - the sequencer generates a virtual switch activated by an event (switch or control position) and then the switch automatically moves thru its positions (3 or 5) in a timed sequence.

THEN you need to assign mixes and/or servos to this virtual switch, that once defined, will show on the switch list on all menus.
